

Choosing the right Foam Cushion

What does the foam grade name mean eg: "HR36-130"?

HR 36 - 130

Foam Classification

Foam Density

Foam Firmness

HR=High Resilience AS2281-1993 Australian Standards Classification

36kg/m3
The higher the density = more material content resulting in a better quality and longer lasting foam.

130 Newtons is a measurement of the force expressed when foam is compressed to 40% of its original thickness. Firmness is a measurement of feel and should not be confused with density/quality.
